

 4626.fun

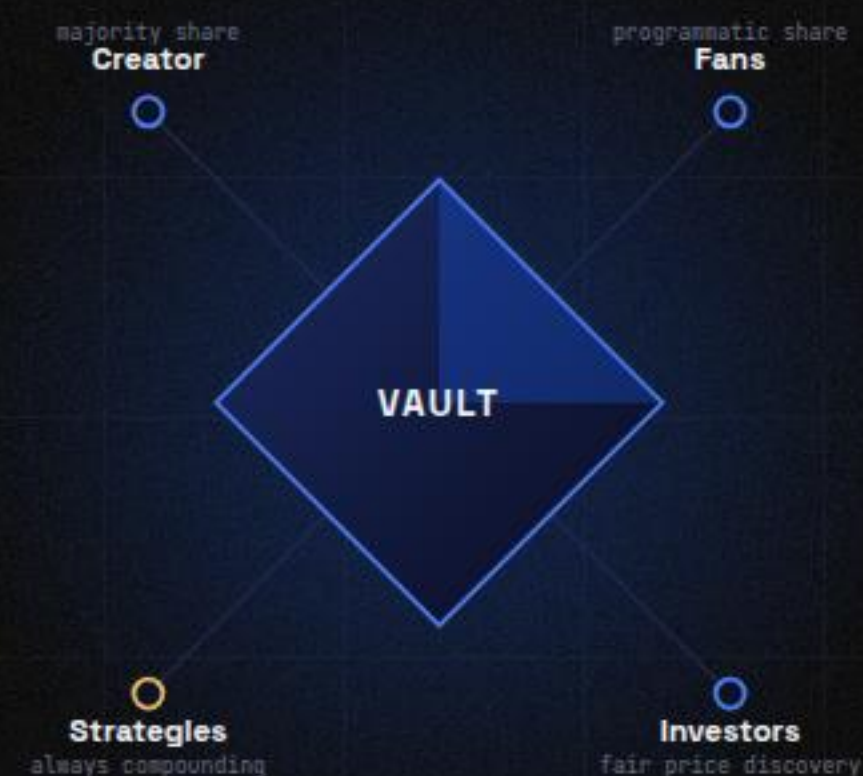

Earn together — *not* *apart.*

ERC-4626 vaults for Zora creator coins. Deposit and hold — don't buy low, sell high and hope.

 Built on Base

 Zora creator coins

 Coinbase Smart Wallet

ERC-4626 · BASE MAINNET

The old model is *speculation*.

Creator coins today are pure price exposure — buy low, sell high, hope you're not last. No claim on the economy, no reward for holding, no fair launch. It's zero-sum: someone always exits holding the bag.

SPECULATE

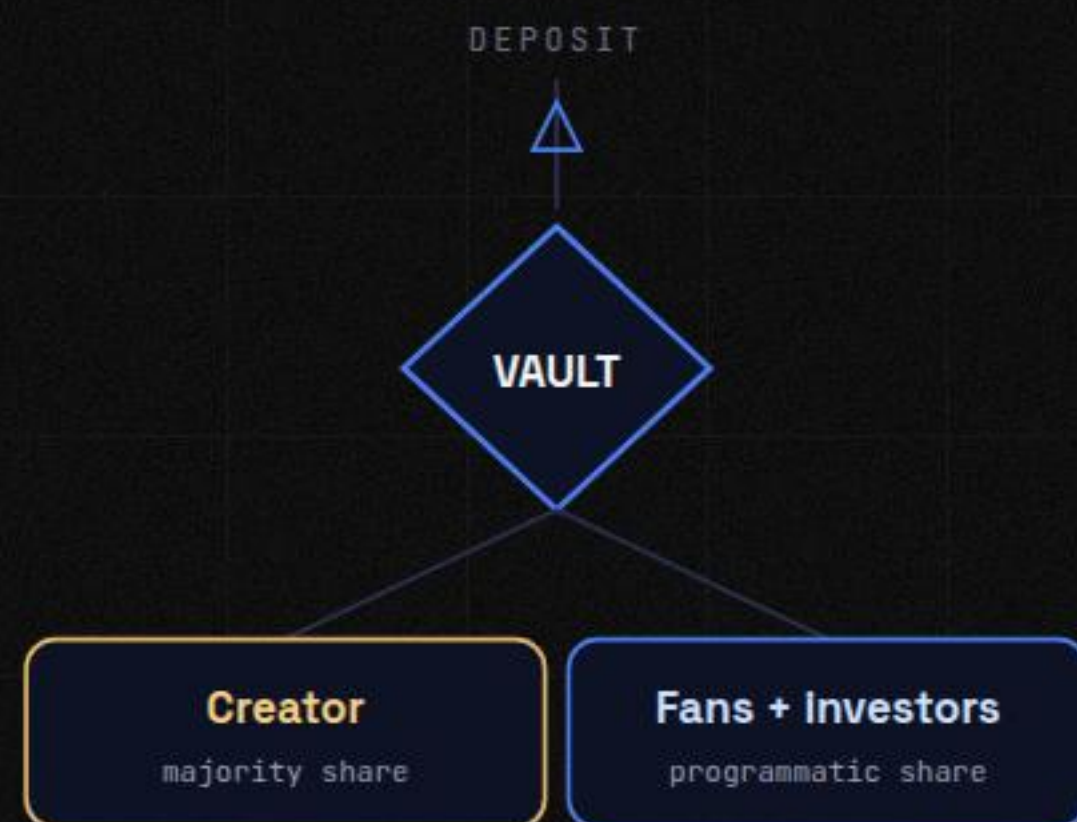

Buy low, sell high —
someone exits holding the bag.

EARN TOGETHER

Deposit, hold, earn a
proportional share, every epoch.

The rails already *exist*.

ERC-4626 makes deposits and proportional rewards simple. Creators still capture the majority of what they create — and fans get a real, programmatic share.

We're done with pump-and-dump as the only story. It's time creators and fans earn together.

CreatorVault on *Base*.

Deposit a Zora creator coin. Mint share tokens. Public price discovery. Tokens go to work.

01

Open the vault

Creator deposits 10% of supply — activates the vault

Uniswap V3 LP

Permissionless lending

Cross-chain yield leg

Liquidity floor

02

Receive shares

Tokens mint 1:1 — pro-rata claim on assets + yield

03

Price discovery

Uniswap CCA over 7 days — no fixed presale price

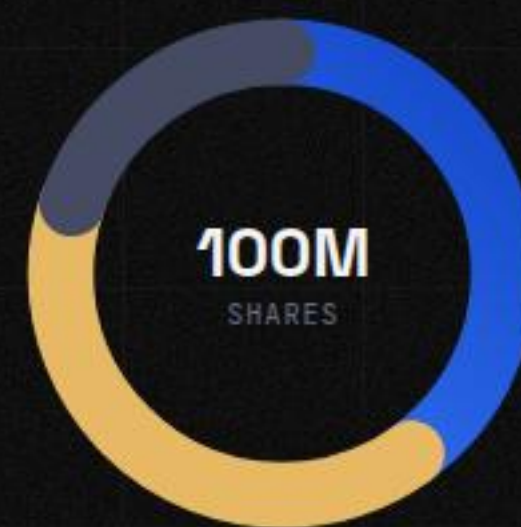

04

Tokens go to work

Deployed to yield strategies — share price rises for all

Fair launch, split *three ways*.

The 100M share tokens minted at activation are split so early supporters, the creator, and exit liquidity are accounted for from day one.

- 40% · CCA launch**
Public price discovery over 7 days on Uniswap
- 40% · Creator vesting**
Earns alongside participants, 1-year schedule
- 20% · LP reserve**
Liquidity for anyone who wants to exit

Almost everything runs on *Base*.

Base is the vault + settlement hub — share tokens are the only piece that bridges out, to Solana.

We've been building here since *Onchain Summer.*

Same thesis, two chapters: social value onchain, then creator vault economies.

ONCHAIN SUMMER

FrenMint (GODDOG)

Social track winner — Friend.Tech
shares as ERC-1155s, 6.9% fee,
DeFi-composable

SINCE

Base-native build

Protocol + app shipped on Base
mainnet, self-funded

TODAY

4626 CreatorVault

Vaults + aligned payouts — not
just cheaper trading

■ Base — settlement + distribution

● Zora — creator coin origin

👁️ Coinbase Smart Wallet — onboarding

Where we *are today*.

Self-funded through protocol and app build. Mainnet infrastructure is live; vaults are not broadly open yet.

FUNDING

Self-funded to date

CHAIN

Base mainnet

\$1–1.5M

First raise · 12–18 months runway

Take CreatorVault from waitlist/canary to open vaults on Base.

Self-funded to date

First institutional check

- **35% · Security**
Audits, mainnet hardening
- **30% · Product & eng**
Deploy UX, Mini App, Telegram, share rails
- **20% · Creator GTM**
Waitlist → live vaults
- **15% · Runway & ops**
Small core team

Earn *together.*

Not another coin to flip. Vault infrastructure for creator economies on Base — creators, fans, and investors holding, and earning, together.
